Executive Snapshot

One-page view of the project's main business signals

SHIPMENTS

30,000

REVENUE

3,495,023

TOTAL COST

2,559,934

PROFIT

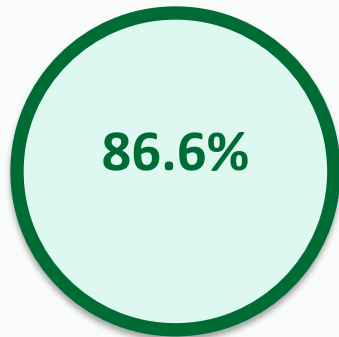

935,089

MARGIN

26.8%

ON-TIME DELIVERY

Target status based on project KPI rule

WHAT THE NUMBERS SAY

- Domestic Economy leads total profit.
- High-margin services deserve protection and scalable capacity.
- Low-margin services need cost and pricing review.
- KPI tracking connects operational execution with financial outcomes.

Project Objective

What the analysis was designed to answer

MEASURE

How profitable are the shipment activities?

COMPARE

Which services and periods perform best?

SUPPLIER

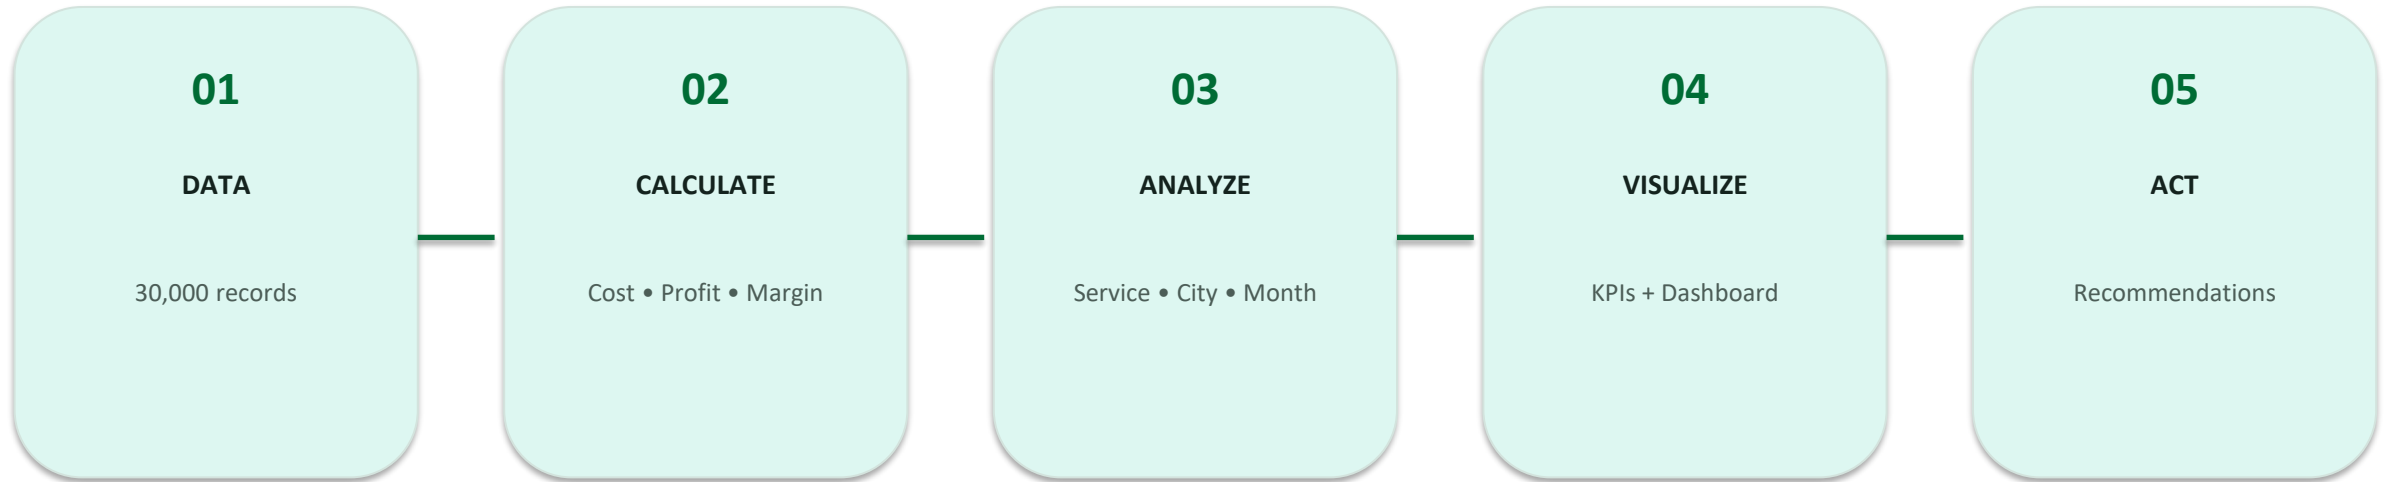

IMPROVE

Where can cost and operational performance improve?

The final output turns raw shipment records into measurable insights, a dashboard, and practical recommendations.

From Data to Decision

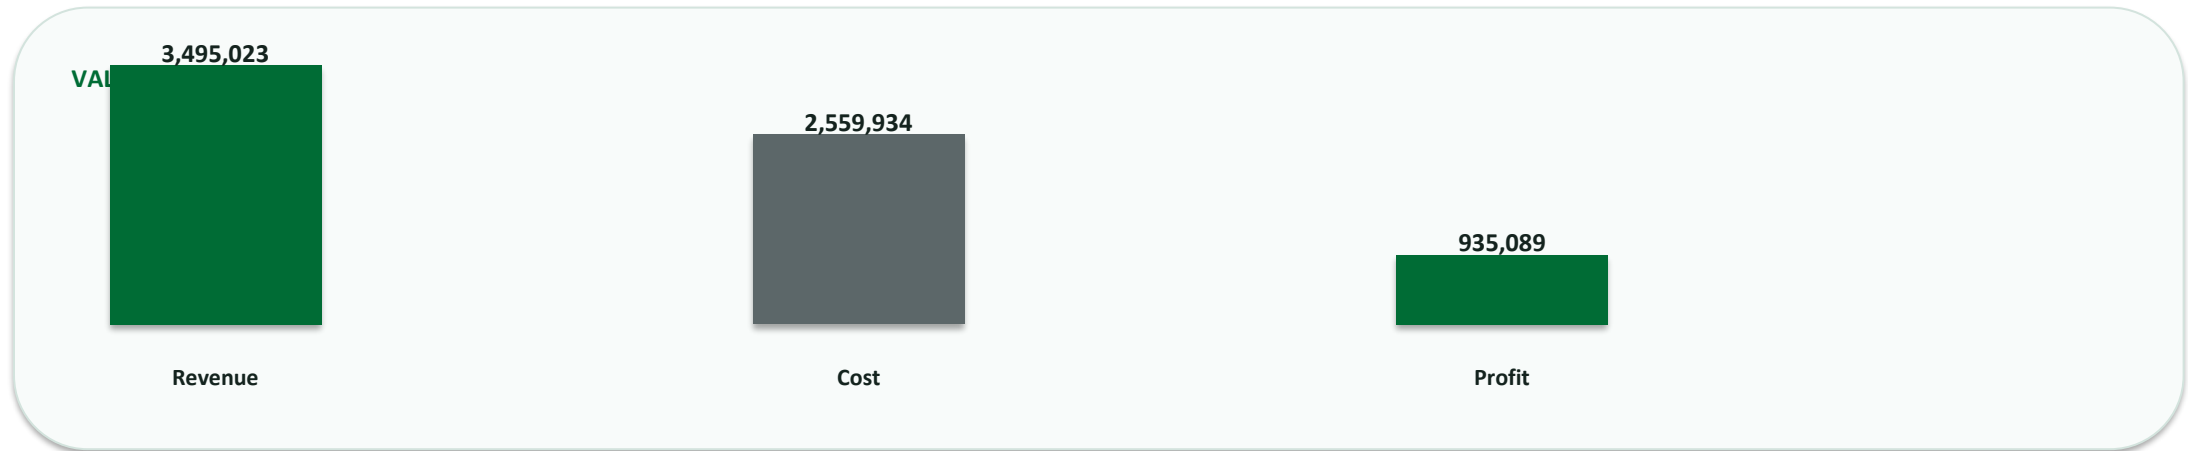

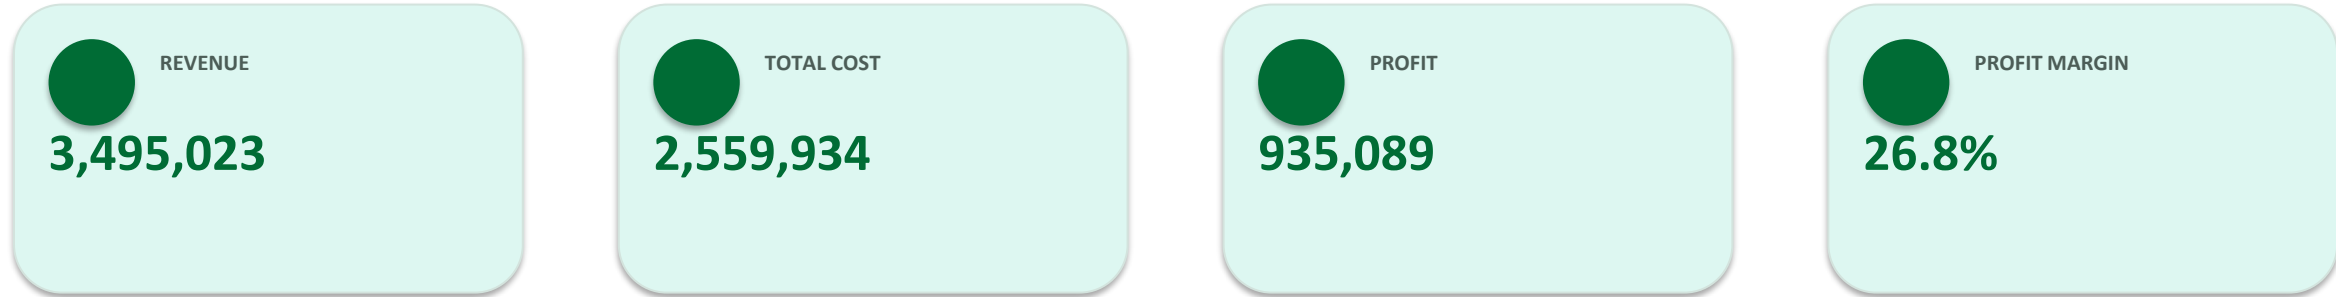

A repeatable analytical workflow

Core formulas: $\text{Total Cost} = \text{Direct Cost} + \text{Other Cost}$ | $\text{Profit} = \text{Revenue} - \text{Total Cost}$ | $\text{Margin} = \text{Profit} \div \text{Revenue}$

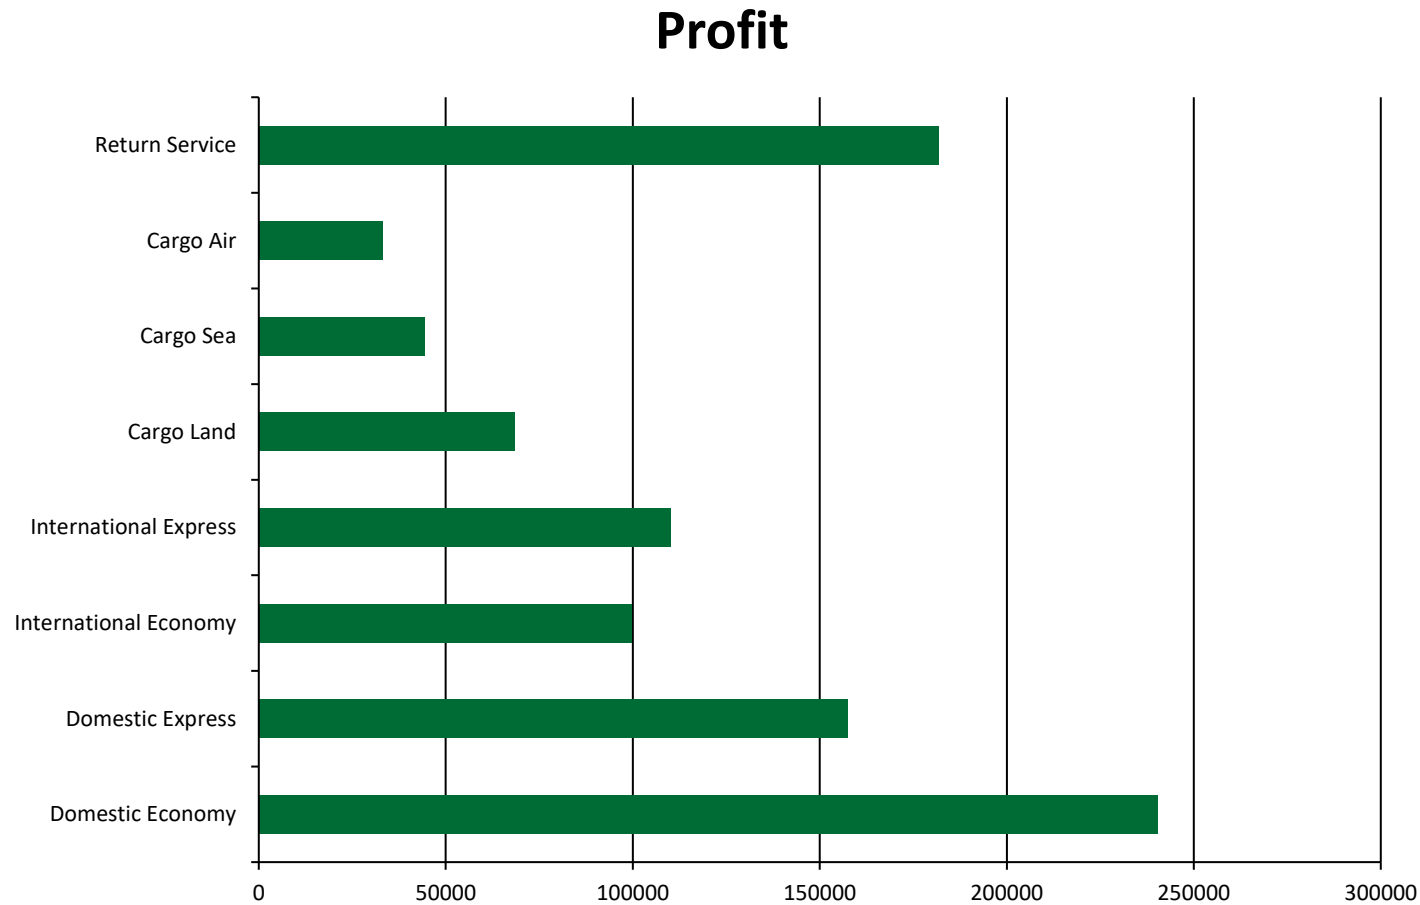

Financial Performance

How revenue translates into cost, profit, and margin

Service Profitability

Where the portfolio creates the most value

KEY TAKEAWAYS

- Highest total profit: Domestic Economy.
- Highest average margin: Domestic Economy (39.2%).
- Lowest average margin: Cargo Air (12.9%).
- Use service-level results to focus pricing and cost actions.

KPI Performance

Simple thresholds turn operational performance into a decision signal

ON-TIME DELIVERY

86.6%

GREEN

≥ 85%

YELLOW

60–84%

RED

< 60%

WHY IT MATTERS

- KPI monitoring gives an early warning for service exceptions.
- Monthly review helps identify recurring operational gaps.
- Performance thresholds create a consistent basis for corrective action.

Procurement Perspective

How the project connects analytics with purchasing decisions

SOURCE

Research suppliers and build a qualified supplier pool.

EVALUATE

Compare cost, quality, reliability, capacity, and requirements.

NEGOTIATE

Improve price, payment terms, lead time, and total value.

MONITOR

Track supplier KPIs: cost, quality, delivery, and service.

Dashboard Design

Designed to answer management questions quickly

Service comparison

Key Insights & Recommendations

Turning analysis into action

01

Protect high-profit services

Maintain quality and scalable capacity.

02

Review low-margin services

Investigate pricing and cost drivers.

03

Strengthen supplier evaluation

Use measurable cost, quality, and delivery criteria.

04

Standardize quotation comparison

Improve consistency and purchasing decisions.

05

Review KPIs monthly

Act early on recurring performance exceptions.

Challenges, Solutions & Skills

What I learned by building the project

CHALLENGES → SOLUTIONS

- 30,000 records → structured tables and organized analysis.
- Multiple KPIs → clear metrics and thresholds.
- Raw numbers → dashboard and visual summaries.
- Analysis → practical procurement and cost recommendations.

SKILLS DEVELOPED

- Excel data analysis & dashboard development
- Cost and profitability analysis
- KPI monitoring & data visualization
- Supply chain and procurement thinking
- Problem solving & data-driven decision making

Conclusion

A portfolio project built around measurable supply chain decisions

- The project transforms shipment data into financial and operational insight.
- Service profitability and KPI analysis reveal where performance can improve.
- The dashboard creates a repeatable framework for monitoring results.
- The approach supports cost control, procurement, and logistics decisions.
